Scientific GUI Calculator in Python

A GUI calculator built using Python's Tkinter module that allows users to interact using buttons for performing mathematical operations.

Supports both Scientific and Standard mode.

The **Standard mode** performs the basic types of calculations such as multiplication, addition, subtraction, division, square root, and percentage calculations.

The **Scientific mode** performs all the operations of the standard mode along with logarithmic and trigonometric functions!

Features - • Easy to use.

• Source code is monolithic, i.e. the entire source code is written in a single file. Hence, easy to download and run!

How to use? | Just download/copy the source code (<u>scientificcalc.py</u>) and run the file. Make sure that all the packages are installed before running. Short descriptions are provided along with the code wherever necessary for your understanding.
